Welcome to Malco electronics

Malco Electronics sold its first LED signal lamp for miniature railways in 2004. However the work began many years earlier. At this point of time, we believe that Malco is the ONLY manufacturer and supplier of LED lamps for the miniature railway community.

Malco also has expertise in Radio Telemetry and solar power. We are merging these technologies so that signals can be remotely powered and controlled. Obviously this can significantly reduce the work and cost required to install signals.

Malco is not a large bureaucratic organization. Our aim is to work closely with our customers and we always welcome new designs to add to our product range. Just ask!

Malco information Updates

Our future updates will be related to the following:

- a Answer questions posted to us either regarding our products, or more general questions regarding LEDs.
- b Each issue will have some kind of tutorial or information about our products. A bit more technical and informative than presented in data sheets.
- c Introduce new products and or developments

Future Developments We are working on 2 major developments.

1. Telemetry for remote signal control
2. Solar powered signals
